4

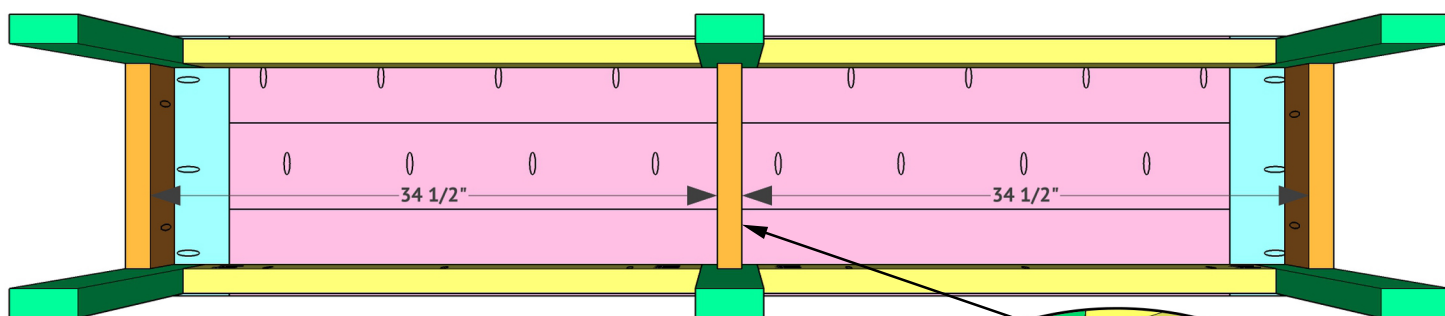

Attach your first leg assembly to the bottom of the bench top. Use wood glue between the joints and attach with 2.5" pocket hole screws.

5

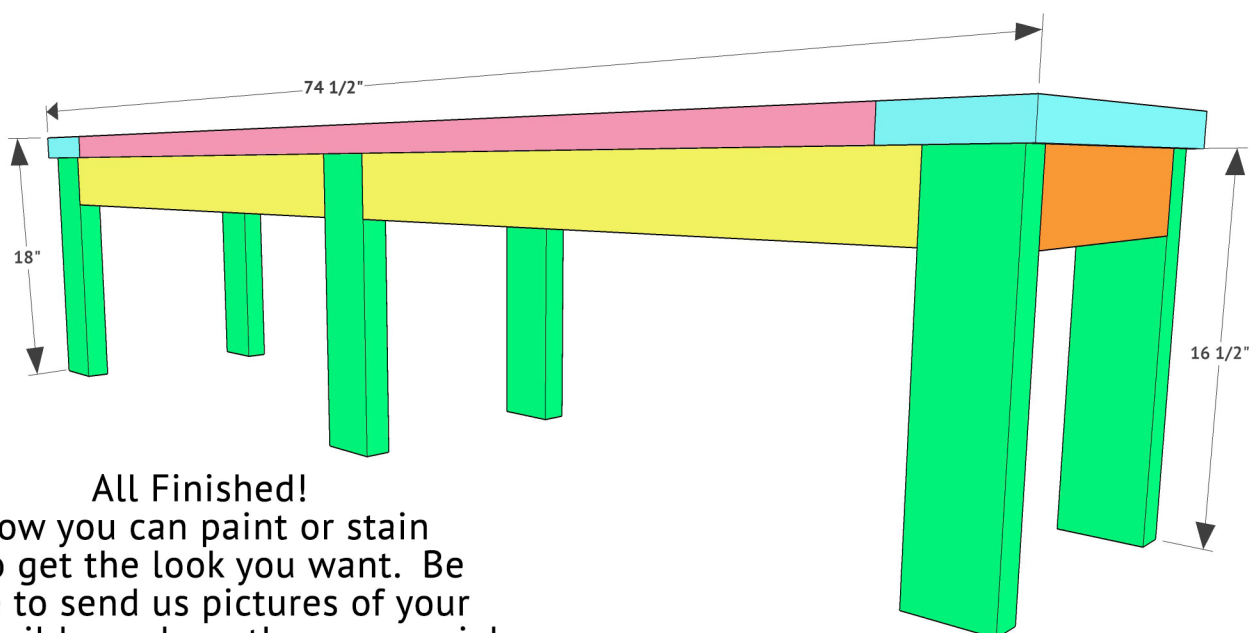

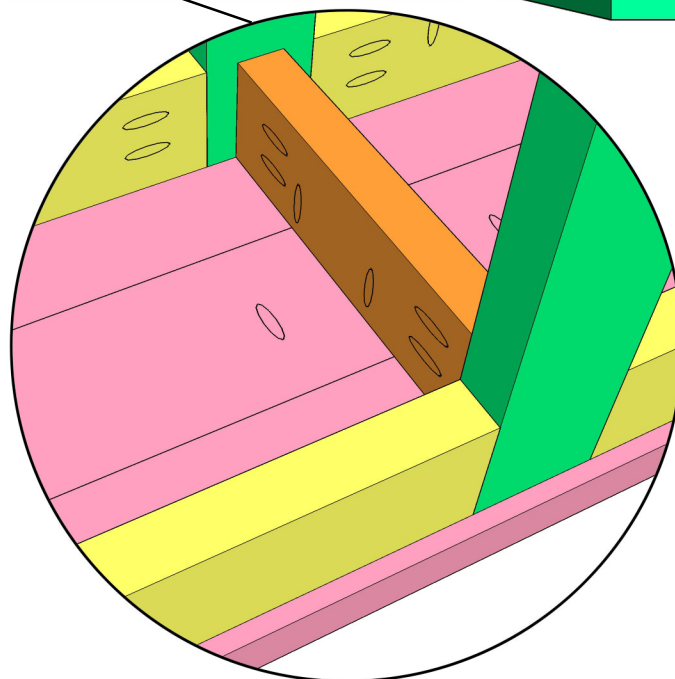

Line up each leg assembly 1/2" from the front and sides of the bench top.

Attach the second leg assembly the same way! Remember to keep the pocket holes facing in so they are hidden when you're finished.

6

Final step! Attach the small aprons to the bench top. This is a tight squeeze, so if you have trouble getting a drill and Kreg driver into the space, you can also use 2.5" wood screws through the front of the legs and into these aprons. You will just need to fill the holes prior to staining or painting the bench!

All Finished!
Now you can paint or stain it to get the look you want. Be sure to send us pictures of your new builds or share them on social and use #shanty2chic so we can share them too!
