Herringbone Bench

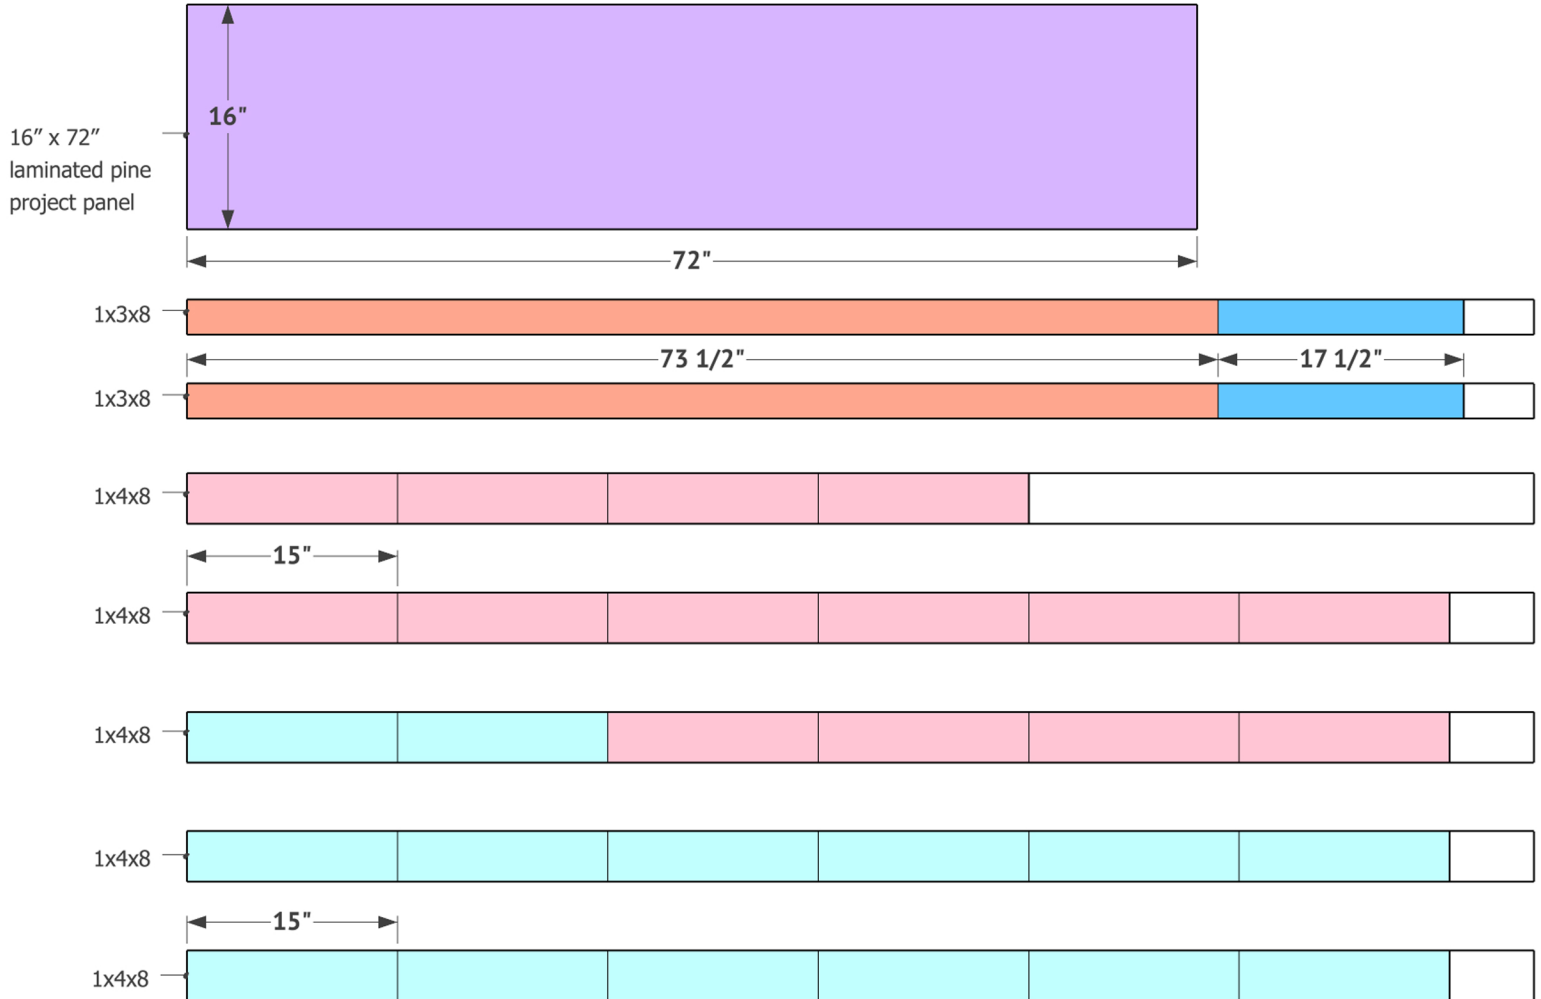

Supply List

Item	Quantity	Description
1x4x8	5	pine or white wood
1x3x8	2	pine or white wood
16" x 72"	1	laminated pine project panel
wood glue		
1.25" brad nails	several	
thick metal hairpin legs	6	check website for link

Remember!

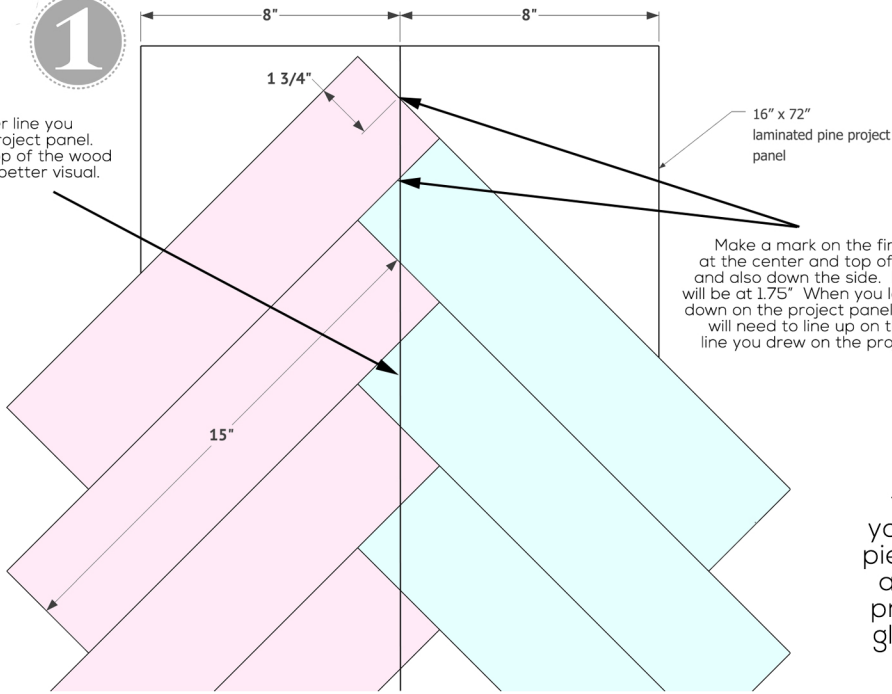

Many of these cuts are best made as you go. If you have questions, check out the tutorial on our site!

CUT LIST

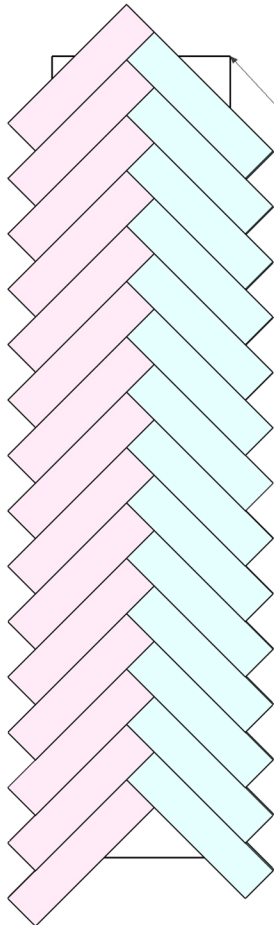

1

This is the center line you will draw on the project panel. I am showing it on top of the wood here to give you a better visual.

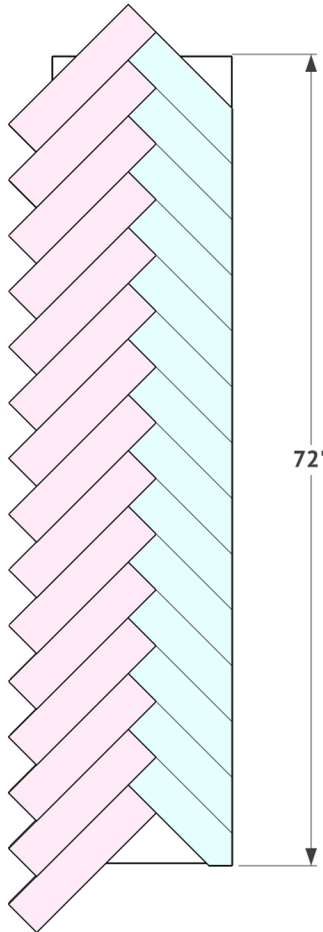

2

Work your way down the project panel until you have placed as many pieces as you can. Attach all of the boards to the project panel using wood glue and 1.25" brad nails.

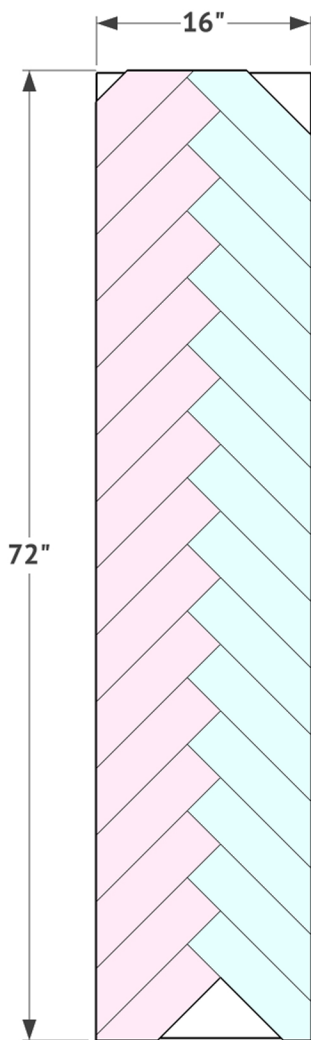

Fill these gaps with scraps once you trim edges

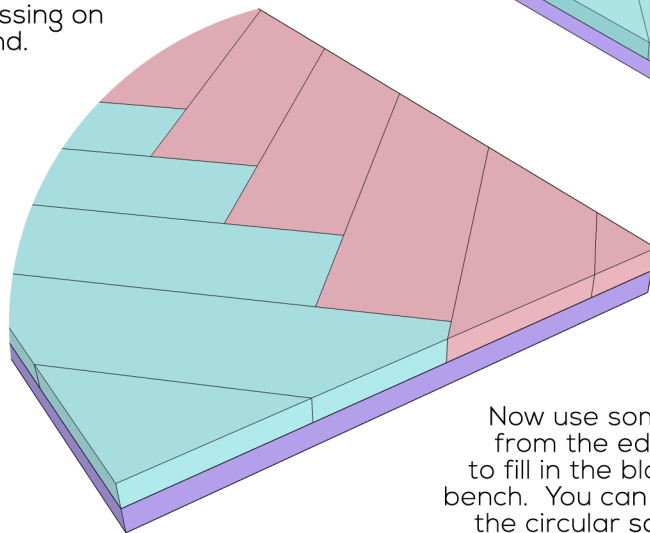

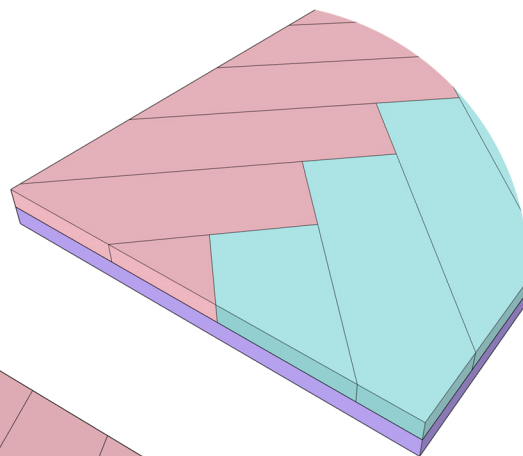

3

Flip the whole thing over and use a circular saw to cut the first edge of the bench. Be sure to check out our video on this part! We show you a great tip to make this part really fast and easy.

4

Next, do the same thing to the other side of the bench. Use the circular saw to make this cut. When you are finished, you will have a rectangle with a herringbone pattern and a few pieces missing on each end.

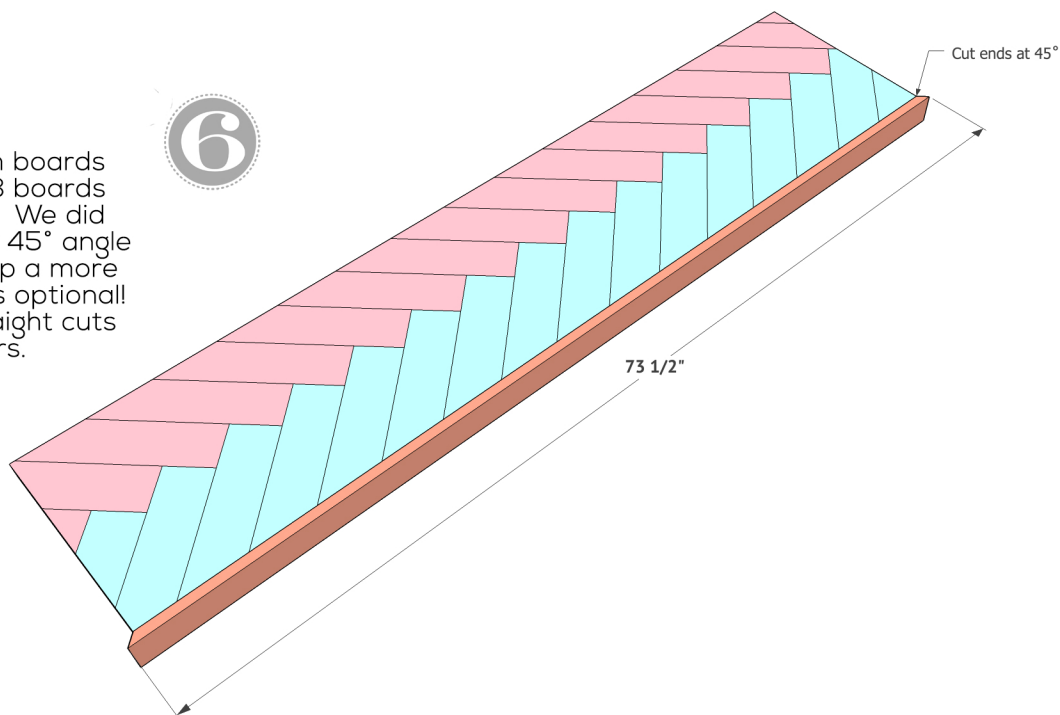

5

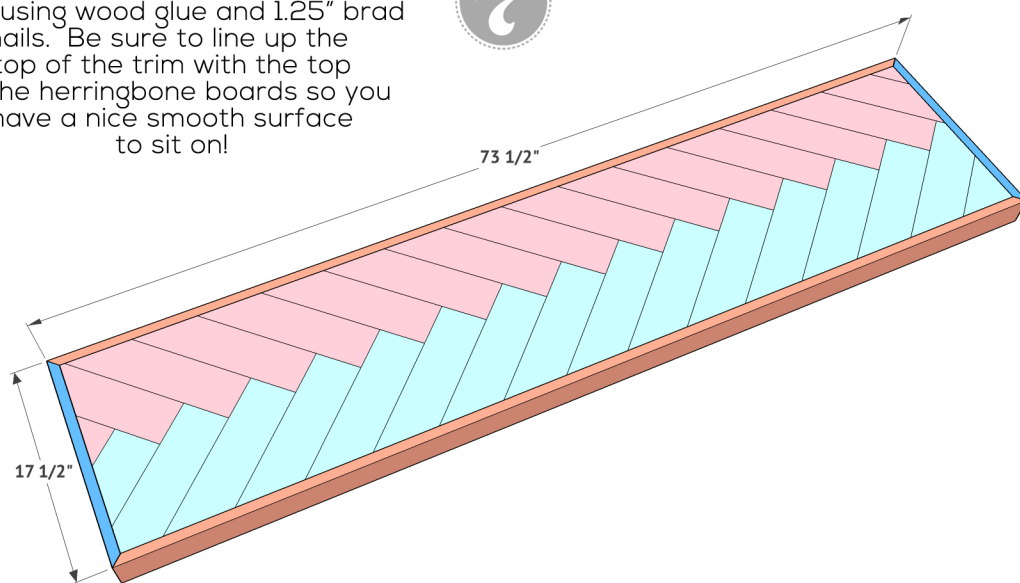

Now use some of the scraps from the edges you just cut to fill in the blank spaces on the bench. You can cut the excess with the circular saw just as you did on the longer sides.

Add the longer trim boards first. These are 1x3 boards that we cut to size. We did miter each edge at a 45° angle to give the bench top a more finished edge. This is optional! You can also do straight cuts on the corners.

6

Now cut your smaller trim boards to fit. Attach all trim using wood glue and 1.25" brad nails. Be sure to line up the top of the trim with the top of the herringbone boards so you have a nice smooth surface to sit on!

The final step is attaching the legs. Be sure to check our website for a link to the legs we used! They are so cute! Also, be sure to share your build on social using #shanty2chic so we can see and share!
